

# Our Services for Architects & Designers

## Helping Architects design firestopping solutions

We believe that effective passive fire protection starts at the design stage. That is why we are committed to supporting architects, designers, specifiers, technical managers and BIM managers from the very beginning of each project with expert technical advice, training opportunities and extra resources.

### TECHNICAL SUPPORT AND RESOURCES

Quelfire's experienced fire containment specialists can provide you with expert technical advice on the specification and design of passive fire protection systems for pipe, duct and electrical service penetrations, as well as linear gaps.

Our friendly and helpful technical team are always ready to get back to you with useful advice, should you need a response to a specific question or a generic overview of the solution.

Our [Information Collection Form](#) helps you provide specific and relevant details for your project so that we can provide relevant tested solutions in return.

Or, with the use of our [QuelSelector Firestopping Solution Finder Tool](#) you can quickly and easily access all our standard details yourself.

Further [product data sheets](#), [installation guides](#) and technical details are available from our website.

### EDUCATION

Our mission is to support all sectors, within the construction industry, in keeping up to date with regulations and knowing where to find the correct information. We have an [early engagement in firestopping](#) approach, meaning we support firestopping requirements from design through to installation.

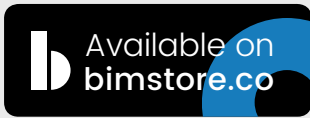

We offer CPD training for '[Effective Passive Fire Protection for Gaps and Penetrations in Buildings](#).' The training enables effective design and specification of complete passive fire protection systems. This can be offered virtually or as a dedicated session onsite.

We also offer [Toolbox Talk Training](#), or product installation training, which work to ensure compliant installations.

## BIM OBJECTS

A range of Quelfire's core products are available as a [Building Information Modelling \(BIM\)](#) object through bimstore. This allows Architects and designers to search and download the components, for free, to use in their own BIM model and understand how a product will work in the real world.

## NBS SPECIFICATIONS

All Quelfire products are available from the [NBS Plus library](#).

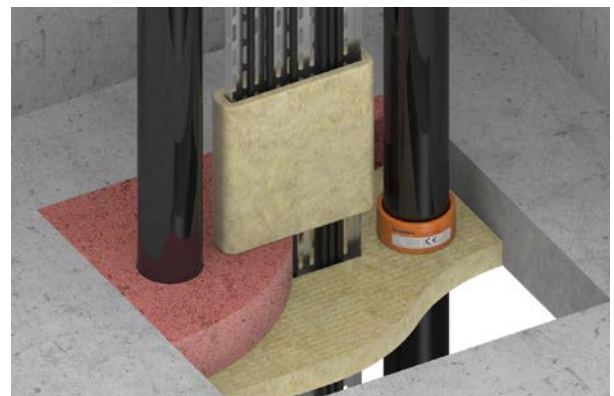

Written in NBS format, Architects and specifiers can gain direct and easy access to Quelfire product information via the specification tool, and products can be dropped straight into a project.

## WE HELP YOU DESIGN COMPLETE FIRESTOPPING SOLUTIONS FOR:

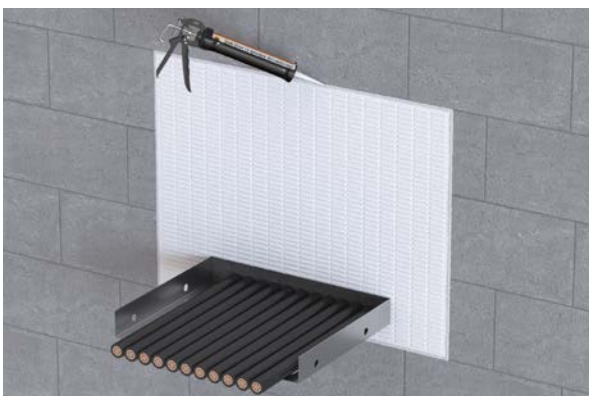

### PLASTIC VENT DUCT PENETRATIONS

### MULTIPLE SERVICE PENETRATIONS

### ELECTRICAL SERVICE PENETRATIONS

### PLASTIC PIPE PENETRATIONS
